- Collaborated within a 6 member team on LEOHDMS, a standardized population management and administrative procedure system.
- Proposed valuable data processing ideas during system development.
- Demonstrated disciplined coding under pressure.
- Assisted in documentation, instructional guides, and unit tests.

PROJECTS

Jul 2023 - Aug 2023

CLONE API AIRBNB

DEVELOPER

REPO: *https://github.com/kigaijidev/capstone-nodejs-airbnb*

TECHNOLOGIES: JAVASCRIPT(ES6), TYPESCRIPT, NODEJS, NESTJS, MYSQL.

I conceived and built a robust Accommodation Booking API inspired by Airbnb. I used Node.js and Nestjs to create a RESTful API, allowing users to manage listings, search for accommodations, and make bookings. This project showcases my backend development skills, API design expertise, and ability to deliver user-focused web solutions.
